## **Kingpin University Partners With Laser Cutter Manufacturer**

*Full Spectrum Laser to co-create education content, offer discounts to mobile electronics retailers*

**LAS VEGAS – February 3, 2021 (MEDIAWIRE)** – Kingpin University, a teaching center and tool supplier for professional mobile electronics technicians and fabricators, announced a partnership with Full Spectrum Laser, a nationwide laser-cutting machine supplier based in Las Vegas. The collaboration will produce educational and training content designed to introduce new technicians to laser cutting machines and raise the skill levels of more experienced users. In addition, industry professionals who attend Kingpin University will receive reduced rates on Full Spectrum Laser equipment.

Kingpin University has conducted training sessions on laser cutting for the past two years. Once thought of as a niche use in high-end fabrication, laser cutting has found application in everyday installs, from creating mounting plates for media controllers and radar detectors to enclosure design and speaker mounting accessories.

“There is huge growth in tooling in our industry, and laser cutting is a significant part of it,” said Jason Kranitz, president and founder of Kingpin University. “We saw the change early and started laser training courses when no one thought it would gain traction. Today it’s one of the most-requested topics from our students. As a result, we sought the partnership with Full Spectrum Laser to bring more value to our trainings. Our students will get so much more out of classes by having a top-tier manufacturer on board with us.”

Formed in 2008, Full Spectrum Laser manufactures several sizes of professional laser cutters to fit a variety of applications. The company’s website, [fslaser.com](http://fslaser.com), features several pages of technical and educational content as well as certification on its products. The company also supplies its own line of software and controllers under its Retina Engrave brand.

Kingpin University will welcome representatives from Full Spectrum Laser at its upcoming classes:

- March 6-7: CAD Drawing for Laser Cutting Applications (online only)
- March 27-29: Laser-Cutting Applications and Projects (in-person at Kingpin University’s new Las Vegas facility)
- April 9-12: Street Rod Customization (in-person)

During the classes, students will gain a broad understanding of laser cutting technology, and in in-person sessions, see and use various models of Full Spectrum Laser cutters.

“We are extremely excited to be able to partner with Kingpin University and help educate the mobile electronics industry on the infinite possibilities that come with laser-cutting machines,” said Robert

Capozzoli, director of sales and marketing for Full Spectrum Laser. “We look forward to planning training sessions in which we include Kingpin University in our live shows as well as participate in Kingpin University’s virtual and in-person training sessions.”

For more information on Kingpin University’s training, products and services, please call (702) 850-2995 or visit [kingpinuniversity.com](http://kingpinuniversity.com).
